## Be Safe When Selecting Quick Couplings!

**!** All quick disconnect couplings should be viewed as potential hazards that can cause property damage, personal injury or even death if used or installed improperly! Improper use includes selecting a product unsuitable for your application, installing or using the product incorrectly and ignoring signs of imminent failure or mis-use. Failure may result in explosive propulsion of components, rapid expulsion of hazardous media, and failure or unintentional movement of a fluid powered component.

### Proper Selection of Quick Disconnect Couplings

The very properties that make a compressed media useful in almost every area of modern life can also make them dangerous when mishandled. Dixon™ quick disconnect couplings have been carefully engineered to meet specific industry requirements while maintaining abundant safety margins. If quick disconnect couplings are not used in the correct applications or are incorrectly applied, accidents and downtime can result. It is up to the end user to inform the distributor of the application and pressures involved when ordering quick disconnect couplings and it is up to the distributor to supply the right coupling for the application.

The use of S.T.A.M.P.E.D. will help in the proper selection of quick disconnect coupling products. When in doubt, Dixon Quick Coupling will provide information, including test results (if available), coupling recommendations and other data to help resolve quick disconnect coupling related issues.

### S.T.A.M.P.E.D. Questions and Selection Process

<b>Size</b>	Couplings should be selected to handle the flow and pressure requirements of the system. Excessive pressure drop will result in restricted flow, slower actuation, higher fluid velocity, heat generation and eventually a breakdown of fluids, seals and components. <ol style="list-style-type: none"> <li>1. What size coupler is required?</li> <li>2. What is the maximum allowable pressure drop for the application?</li> <li>3. Are there any size restrictions due to a 'tight-spot' installation?</li> </ol>
<b>Temperature</b>	Media and ambient temperatures must be limited to the specific operating parameters of the selected sealing materials. Excessive cold will reduce sealing capability while excessive heat can cause the premature breakdown of body and valve seals. <ol style="list-style-type: none"> <li>1. What is the media/fluid temperature?</li> <li>2. What is the ambient temperature?</li> <li>3. Are there any 'flash' heat or fire sources near the connection?</li> </ol>
<b>Application</b>	Quick coupling interchangeability is a key issue that needs to be closely reviewed. There are several instances where non-interchangeable couplers and nipples may connect. This is very dangerous and these couplings should never be pressurized. Be sure to match like series couplers and nipples! <ol style="list-style-type: none"> <li>1. Is an industry interchange coupler required?</li> <li>2. What are the functional requirements of the coupling?</li> <li>3. Have there been any problems with other couplings in this application?</li> </ol>
<b>Media</b>	Quick disconnect couplings are available with a variety of body materials and seal options. Exposure to harsh and corrosive operating environments may reduce service life. Several quick couplings spill fluid upon disconnection which may be a safety concern! <ol style="list-style-type: none"> <li>1. Which seal and body materials are compatible with the system fluid?</li> <li>2. Is air inclusion, system contamination or fluid loss a concern?</li> <li>3. Is this fluid dangerous to the operator?</li> </ol>
<b>Pressure</b>	During the selection process, the published working pressure of the coupling must be equal to or greater than the maximum system pressure. Surge pressures in a fluid power system, higher than the rated pressure, will shorten the service life of the coupling. <ol style="list-style-type: none"> <li>1. Is the pressure 'Static' or 'Dynamic'?</li> <li>2. What is the maximum operating pressure required for the application?</li> <li>3. Are there any pressure spikes in the system?</li> </ol>
<b>Ends</b>	Many end configurations are available and each one has specific operating parameters. For example, the working pressure of couplings utilizing Hose Barb or Collar Hose Barb end connections may be dramatically reduced. If in doubt, test under controlled conditions for suitability to the application. <ol style="list-style-type: none"> <li>1. What end configuration and size is required? (Male Threaded, Female Threaded, or Hose Barb)</li> <li>2. Does the chosen end configuration support the application parameters and system pressure?</li> <li>3. What is the ideal valving configuration? (Single Shut-off, Double Shut-off, or Unvalved)</li> </ol>
<b>Details</b>	Forgotten or missed application details can cause a failure if not properly addressed! Be meticulous in the assessment of your application to ensure that all parameters are considered in the selection of the proper quick disconnect coupling. <ol style="list-style-type: none"> <li>1. Are there any side-load, vibration or swivelling problems associated with the application?</li> <li>2. Does the coupling require a safety sleeve-lock mechanism?</li> <li>3. Are there any environmental concerns that need to be addressed?</li> </ol>

## Be Safe When Selecting Quick Couplings!

**!** Quick disconnect couplings can fail without warning! Prior to the operation of quick coupling products, be sure to inspect and replace worn out fittings and safety devices. If a leak is detected during operation, release the pressure from the circuit before investigating the cause of the fluid leak. Do not use your fingers or skin to check for leaks, high pressure leaks of fluids can easily penetrate the skin and can cause serious injury or death.

### Safe Quick Coupling Practices

-  1. Always wipe the coupling cavities and faces clean before connecting a coupling.
- 2. Connect coupling before installation to ensure that it works properly.
- 3. Always check the body seals before connecting a coupling.
- 4. Shut-off power source before connecting a coupling.
- 5. Always install a safety check valve on a pneumatic line and/or compressor.
- 6. Always use a safety cable on large air lines (½" lines and larger).
- 7. Always use a whip hose on hydraulic or air tools.
- 8. Use dust caps or plugs when couplings are not in use.
- 9. If the locking sleeve is inoperable, check the safety lock.
- 10. Wear eye protection while connecting or disconnecting a coupling.

### Unsafe Quick Coupling Practices

-  1. Never hit coupling valves to release trapped pressure.
- 2. Never leave couplings in the path of moving equipment.
- 3. Never use couplings near a welder, flash heat, or fire / flame sources.
- 4. Never use API modified sealants or over apply PTFE tape during installation.
- 5. Use care if you must install quick couplings onto black iron pipe.
- 6. Never hit a coupling sleeve with a hammer or blunt object.
- 7. Never overtighten a coupling connection.
- 8. Never rotate a quick disconnect coupling under pressure.
- 9. Do not overpressurize quick disconnect couplings.
- 10. Never use a hose with a quick disconnect coupling to lift a tool.

### OSHA Regulations Ensure Operator Safety

Safety Cables

Safety Check Valves

**Standard - 29 CFR, 1926.302 (partial):**

(b)(1) Pneumatic power tools shall be secured to the hose or whip by some positive means to prevent the tool from becoming accidentally disconnected.

(b)(2) Safety Clips or retainers shall be securely installed and maintained on pneumatic impact (percussion) tools to prevent attachments from being accidentally expelled.

(b)(4) Compressed air shall not be used for cleaning purposes except where reduced to 30 PSI and then only with effective chip guarding and personal protective equipment which meets the requirements of Subpart E of this part. The 30 PSI requirement does not apply for concrete form, mill scale and similar cleaning purposes.

(b)(5) The manufacturer's safe operating pressure for hoses, pipes, valves, filters and other fittings shall not be exceeded.

(b)(6) The use of hoses for hoisting or lowering tools shall not be permitted.

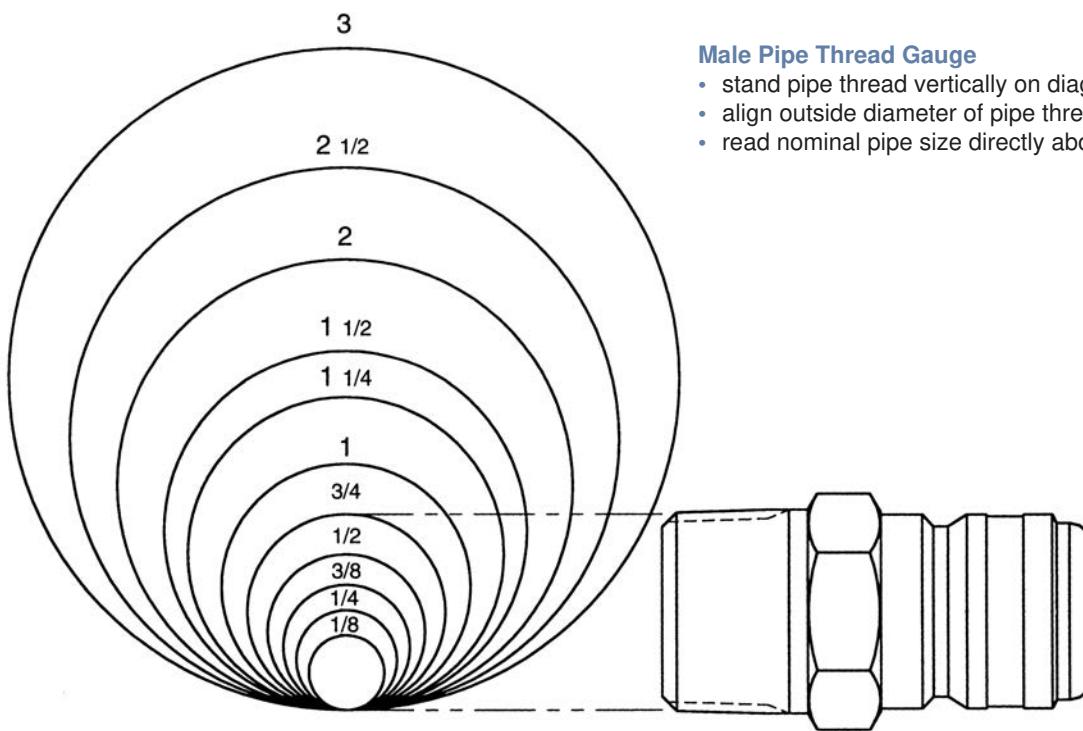

(b)(7) All hoses exceeding ½" inside diameter shall have a safety device at the source of supply or branch line to reduce pressure in case of hose failure.

**Standard - 29 CFR, 1926.603 (partial):**

(a)(9) Steam hose leading to a steam hammer or jet pipe shall be securely attached to the hammer with an adequate length of at least ¼" diameter chain or cable to prevent whipping in the event the joint at the hammer is broken. Air hammer hoses shall be provided with the same protection as required for steam lines.

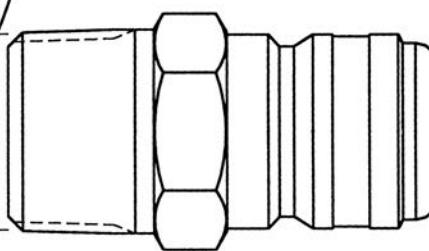

(a)(10) Safety chains, or equivalent means, shall be provided for each hose connection to prevent the line from thrashing around in case the coupling becomes disconnected.

## Male / Female Pipe (NPTF) Thread Identification

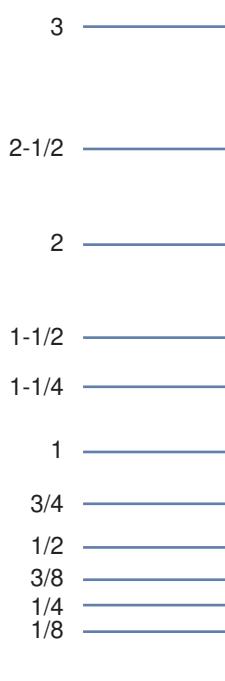

### Male Pipe Thread Gauge

- stand pipe thread vertically on diagram
- align outside diameter of pipe thread with matching circle
- read nominal pipe size directly above circle

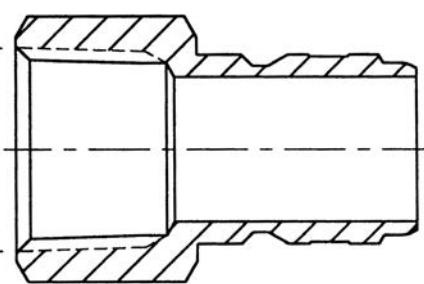

Example:  $\frac{3}{4}$  male pipe  
(Dixon™ end size = 6)

### Female Pipe Thread Gauge

- hold pipe thread against scale on edge of page
- align one side of pipe thread with illustration base line
- read nominal pipe size directly from scale

Nominal Pipe Size (inches)	Dixon™ End Size	Nominal Thread Size (inches)	Nominal Pipe Size (inches)
1/8	1	1/8 - 27	0.41
1/4	2	1/4 - 18	0.54
3/8	3	3/8 - 18	0.68
1/2	4	1/2 - 14	0.84
3/4	6	3/4 - 14	1.05
1	8	1-11-1/2	1.32
1-1/4	10	1-1/4 - 11-1/2	1.66
1-1/2	12	1-1/2 - 11-1/2	1.90
2	16	2 - 11-1/2	2.38
2-1/2	20	2-1/2 - 8	2.88
3	24	3 - 8	3.50

Example:  $\frac{3}{4}$  female pipe  
(Dixon™ end size = 6)

## Glossary of Quick Coupling Terms

**Absolute Pressure:** A measure of pressure having its zero point at atmospheric pressure. For example, the sum of atmospheric and gauge pressure would be absolute pressure (PSIA). For vacuum, it is expressed in inches of mercury.

**Accidental Disconnection:** Disconnection of a coupling while in operation due to failure of the coupling mechanism (a.k.a. unintentional disconnection).

**Accumulator:** A container in which fluid is stored under pressure as a source of reserve fluid power.

**Aeration:** Air in a fluid

**Air Inclusion:** The air forced into the system during the connection of a quick disconnect coupling.

**Atmospheric Pressure:** Pressure exerted by the atmosphere at any specific location. Sea level pressure is approximately 14.7 PSI.

**Backpressure:** Refers to pressure existing on the discharge side of a system.

**Bar:** An international standard unit of pressure equal to 100,000 Pascals, approximately 14.5 PSI.

**Blind-Mate:** A coupling that can be automatically connected without human intervention and without visibility.

**Break-Away:** Automatic disconnection of a coupling when an axial separation force is applied.

**Brinelling:** Dimples or grooves worn into the shoulder of a male half by locking balls in the female half. This is terminology stemming from a test that is done to evaluate the hardness of metals. Swedish metallurgist, Johan August Brinell (1849-1925), developed a hardness test that measures the relative hardness of metals and alloys by forcing a 10 mm hard steel ball into a test piece with a 3000 kg load for 30 seconds. After completion of the test, the surface area of the resulting indentation was measured.

**Burst Pressure:** The pressure at which a device loses the capability to retain pressure.

**Case Hardening:** Hardening the entire surface of a low carbon steel to a specific depth.

**Cavitation:** A localized gaseous condition within a liquid stream which occurs where the pressure is reduced to the vapor pressure.

**Charge Pressure:** The pressure at which replenishing fluid is forced into the hydraulic system (above atmospheric pressure).

**Check Valve:** A valve which permits flow of media in one direction only.

**Cold Flow:** Continued deformation under load.

**Connect Under Pressure:** The ability to connect coupling halves with internal line pressure applied to either both sides or one side.

**Contamination:** Any material foreign to a media that has a harmful effect on its performance in a system.

**Coupling, Female Half:** a.k.a. coupler, socket, receiver

**Coupling, Male Half:** a.k.a. nipple, plug, adapter

**Coupling, Quick Disconnect:** A component which can quickly join or separate a fluid line without the use of tools or special devices.

**Differential Pressure:** (DP) The difference in pressure between any two points of a system or a component, also known as Delta-P or pressure drop.

**Drybreak Coupling:** A coupling that allows connection and disconnection without spillage or air inclusion (a.k.a. flush face, flat face, no-spill)

**Double-Acting Sleeve:** Permits push-to-connect and pull-to-connect convenience when female half is mounted on the sleeve.

**Dust Cap:** Dust or dirt repelling enclosure for the nipple.

**Dust Plug:** Dust or dirt repelling enclosure for the coupler.

**Dynamic Pressure:** Pressure that, once it is released, is able to be immediately replenished.

**Flow Checking:** Occurs when a valve closes during flow conditions, such as when quickly lowering a heavy implement (a.k.a. check off, back checking, lock-up).

**Flush Position (valve):** A no-spill valve that allows connection and disconnection without spillage or air inclusion. (a.k.a. flush face, drybreak, no-spill).

**Force to Connect:** Axial and/or rotational force required to make a complete connection.

**Force to Disconnect:** The reverse of the above.

**GPM:** Acronym for Gallons Per Minute, a measure of flow.

**Leakage:** The media that is unintentionally released from a coupling due to component failure or retention weaknesses.

**LPM:** Acronym for Liters Per Minute, a measure of flow.

**Induction Hardening:** Hardening of a localized area of medium or high carbon steel.

**Operating Pressure:** The pressure at which a system is operated (a.k.a. working pressure).

**Peak Pressure:** Maximum momentary pressure encountered in the operation of a component (a.k.a. pressure spike, surge pressure)

**Pressure Cap:** A cap which incorporates a seal capable of withstanding the rated pressures on the male half.

**Pressure Impulse Test:** Subjecting a component to a specified pressure at a specific rate of increase or decrease for a specified time limit and cycle.

**Proof Pressure:** The nondestructive test pressure in excess of the maximum rated operating pressure, generally 1.5 times the standard operating pressure.

**PSI:** Acronym for Pounds Per Square Inch, a measure of pressure.

**Push to Connect:** Locking arrangement which permits one handed connection by pushing the nipple into the coupler (a.k.a. automatic sleeve, automatic collar, automatic connection).

**Rotation:** The act of spinning the coupler and nipple in opposite directions in a continuous manner beyond 360°.

**Single Acting Sleeve:** Making connection requires manually pulling female sleeve back, inserting the male tip (a.k.a. semi-auto sleeve, manual sleeve)

**Sleeve Lock:** A coupling arrangement that provides an additional lock which must be actuated before locking sleeve can be retracted (a.k.a. pin-lock, locking sleeve).

**Spillage:** The fluid released from the system due to disconnection of a quick disconnect coupling. This is the fluid trapped between the mating seal and the valve seal of the coupling halves.

**Static Pressure:** Pressure that, once released, is not able to be immediately replenished.

**Surge Flow:** A rapid increase in fluid flow.

**Swivel:** The act of spinning the coupler and nipple in opposite directions to a degree that is less than 360°.

**Thermal Build-Up:** Pressure caused by expansion of a media due to heat from an external source such as sunlight (a.k.a. thermal expansion).

**Trapped Pressure:** Pressurized fluid trapped behind a closed coupling valve.

**Turbulence:** Is the condition where the media does not move smoothly parallel to the flow direction. Turbulent flow is caused by abrupt changes in direction, changes of cross-section, or by high velocity. The result is increased friction, which generates heat, decreases operating pressure and wastes power.

**Twist Lock:** A locking arrangement which requires a rotational actuation to unlock the mating halves.

**Vacuum:** Partially or completely exhausted of air, gas or other media to create a negative pressure. Theoretically, a perfect vacuum would be measured as 30 inches of mercury, but that is unattainable. The true perfect vacuum is 29.7 inches of mercury.

## Be Safe When Installing Quick Couplings!

**!** All quick disconnect couplings should be viewed as potential hazards that can cause property damage, personal injury or even death if used or installed improperly!

Couplings should be installed in a location that will allow easy operation of the coupling and accessibility for all necessary installation tools. Care should be given to consider operator safety, especially if spillage upon disconnection could result in fluid ignition or skin and eye irritation.

Only apply wrenches to the hex or machined wrench flats that are provided for assembly purposes, nowhere else. Never clamp on the sleeve of the coupler or the nose of the nipple, this will cause distortion and/or damage.

Finally, always test quick coupling installations before putting into operation by pressurizing the unit to 150% of the working pressure in an enclosed/protective environment.

### Installation of Tapered Thread Connections (NPTF)

The seal for NPTF threads is created by the metal-to-metal contact between the roots and crests of the male and female threads. Too much PTFE tape, or pairing liquid sealant with PTFE tape may cause distortion, poor thread engagement, or cracking of the coupling during assembly.

The total number of tapered threads engaged should be between 3½ to 6. Any number of threads outside this range may indicate either under or over tightening of the joint or out of tolerance threads. After assembly of a NPTF thread connection, always proof-test the connection before operating the system. If the joint proves to be inadequately tightened during proof-pressure testing, tighten it further in 1/8 turn increments until a reliable seal is attained (do not exceed 3 T.F.F.T.)

1

Apply 1½ to 2 wraps of PTFE tape, starting one or two threads from the lead edge, in a clockwise direction. For 316 stainless steel, be sure to use stainless grade tape.

2

Check threads to make sure there is no obvious damage on either half and that tape is properly installed. Align male and female threaded connections and carefully begin threading the two halves together.

3

Finger tighten the connection and create a reference mark on the hex of the hose end/adapter and the coupling. This mark will help identify the number of revolutions during the next step in the procedure.

4

With even and smooth force applied, wrench tighten according to the 'Turns From Finger Tight' (T.F.F.T.) values listed below.  
DO NOT OVERTIGHTEN!

SAE Size	NPTF Thread Size	T.F.F.T
-4	1/4" - 18	2
-6	3/8" - 18	2
-8	1/2" - 14	2
-12	3/4" - 14	1.5
-16	1" - 11 1/2	1.5

# Be Safe When Installing Quick Couplings!

## Installation of O-ring Boss (ORB) Connections

1

Lightly lubricate the O-ring on the adapter and thread it into the coupling. Hand-tighten, ensuring that the O-ring is not pinched during installation.

2

Wrench tighten the connection to the appropriate torque specification, as shown in the chart below.

SAE Size	Thread Size	Torque Nm	Torque lb·ft
-4	7/16"-20	18-20	13-15
-6	9/16"-18	29-33	22-24
-8	3/4"-16	49-53	40-43
-10	7/8"-14	59-64	43-48
-12	1-1/16"-12	93-102	68-75
-16	1-5/16"-12	151-166	112-123
-20	1-5/8"-12	198-218	146-161
-24	1-7/8"-12	209-231	154-170

## Installation of 37° Flare (JIC) Connections

1

Lightly lubricate the flare on the adapter and thread it into the coupling. Hand-tighten, ensuring that the flare is seated correctly during installation.

2

Wrench tighten the connection to the appropriate torque specification, as shown in the chart below.

SAE Size	Thread Size	Torque Nm	Torque lb·ft
-4	7/16"-20	15-16	11-12
-6	9/16"-18	24-28	18-20
-8	3/4"-16	49-53	36-39
-10	7/8"-14	77-85	57-63
-12	1-1/16"-12	107-119	79-88
-16	1-5/16"-12	147-154	108-113
-20	1-5/8"-12	172-181	127-133
-24	1-7/8"-12	215-226	158-167

## Be Safe When Installing Quick Couplings!

### Installation of Reusable Hose Couplings

1

Trim the end of the hose as square as possible.

2

Install ferrule by slipping it onto the end of the hose and twisting it counter-clockwise.

3

Apply lubricant sparingly to the reusable barb before inserting it into the ferrule.

4

Turn the reusable fitting into the ferrule until coupling is seated against ferrule.

### Installation of Push-Loc Hose Connections

1

Trim hose end squarely and lubricate the Push-Loc barb and hose. Insert Push-Loc barb into the hose until first barb is inside the hose.

2

Place the end of the fitting against a flat object and grip the hose one inch from end. Push with a steady force until the end of hose is covered by the yellow plastic cap.

# Be Safe When Installing Quick Couplings!

## Installation of 'N' and 'P' Series Ferruled Hose Bars

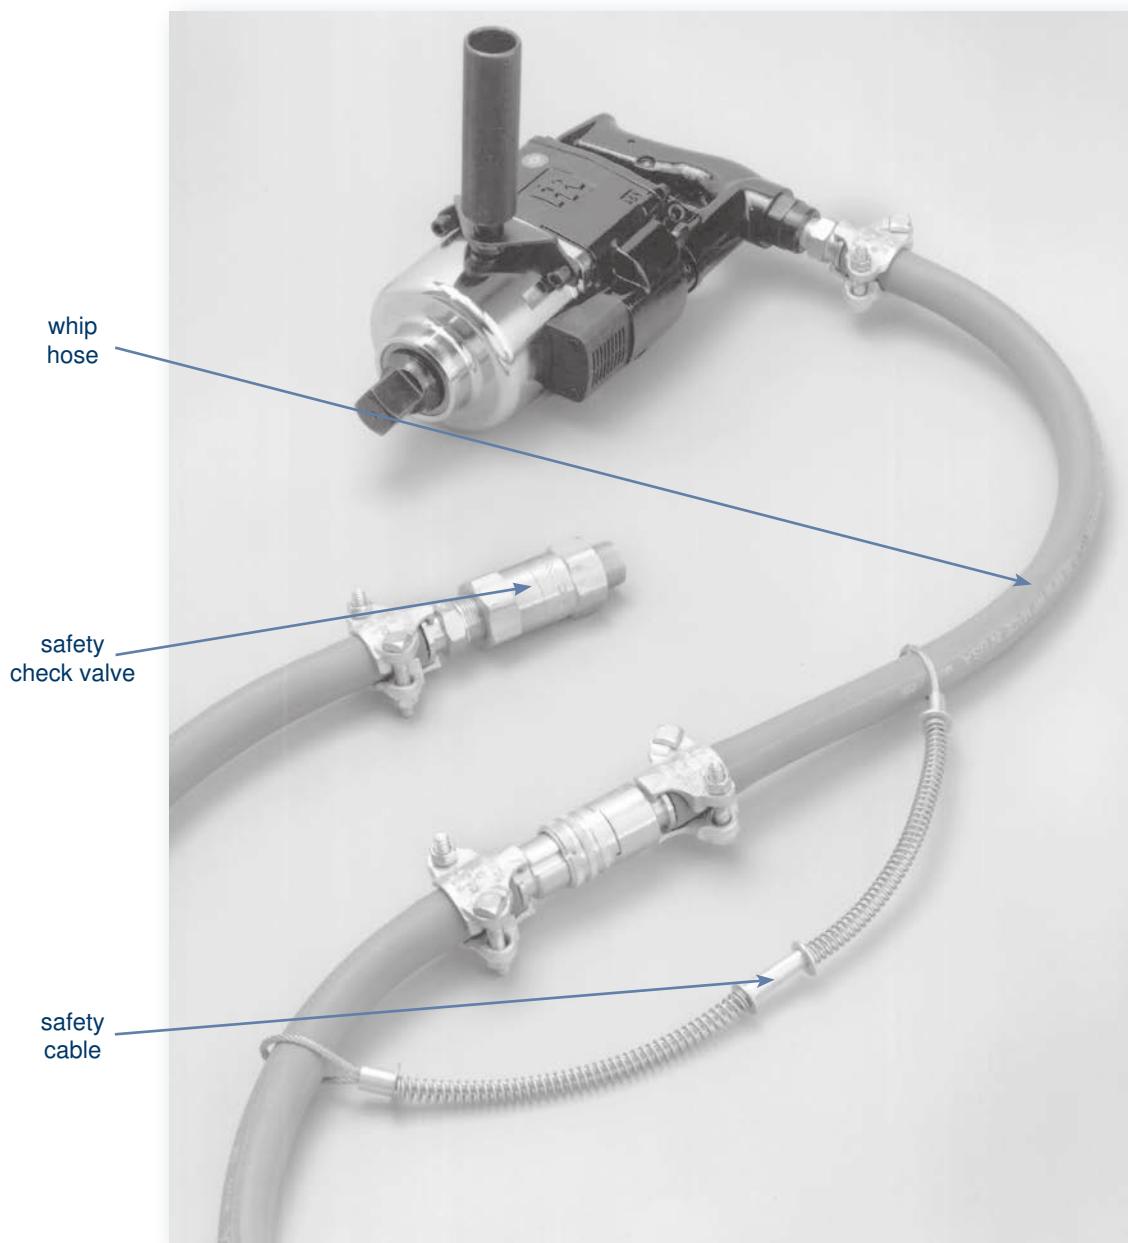

Note that the charts below are to be used only as a guide and not as a steadfast rule for every coupling application. In some instances, alternative dies and crimped dimensions must be employed. Hoses, as well as couplings, react differently during crimping. This is due to the fact that there are variances in hose constructions for hose with similar dimensions. Some variables are: textile braid versus wire braid, hardwall versus softwall, presence or lack of internal spiral wire as well as differences in hose covers. In addition, the outer diameter of the hose tends to fluctuate from end to end and production lot to production lot. With this in mind, we suggest that you measure the hose OD and maintain accurate records for each coupling application.

Hose ID	Fractional Hose OD	Decimal Hose OD	'N' Crimp Length	'N' Crimp OD ±.005	'P' Crimp Length	'P' Crimp OD ±.005
1/2"	54/64"	0.844	1-1/8"	0.917	1-1/4"	0.917
1/2"	55/64"	0.859	1-1/8"	0.929	1-1/4"	0.929
1/2"	56/64"	0.875	1-1/8"	0.942	1-1/4"	0.942
1/2"	57/64"	0.891	1-1/8"	0.954	1-1/4"	0.954
1/2"	58/64"	0.906	1-1/8"	0.987	1-1/4"	0.987
1/2"	59/64"	0.922	1-1/8"	0.980	1-1/4"	0.980
1/2"	60/64"	0.938	1-1/8"	0.992	1-1/4"	0.992

## Installation of Pneumatic Couplings

It is important to be safe when installing quick disconnect couplings into a pneumatic circuit. Never install a pneumatic coupling directly into an air tool, use a piece of hose that is at least 18" long, between the tool and the coupling, to prevent damage to the coupling. To protect the operator, safety devices, such as a safety check valve and safety cable should be installed in case there is a hose or coupling failure.

## Fluid Compatibility Guide

The following chart is intended only as a guide in selecting various elastomers and metals for use with fluids to be conveyed through Dixon Quick Disconnect Couplings. This list does not guarantee suitability for a particular application. Final selection is dependent upon operating pressure, fluid and ambient temperature, concentration of media, duration of exposure, environmental conditions, and frequency of connect and disconnect.

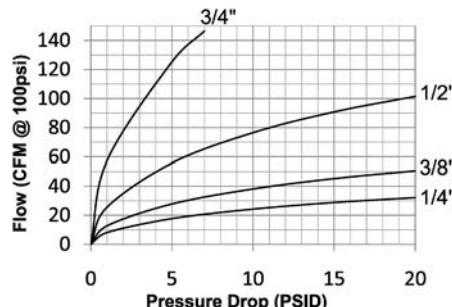

Material	Prefix Code	Trade Name	Availability	Range °C	Range °F
Buna-N	Standard	Nitrile	Stock	-40°C to +121°C	-40°F to +250°F

## Materials:

- Machined components are manufactured using solid steel, brass, or 303 stainless steel bar stock.
- Stainless steel balls, retaining rings, and springs maximize corrosion resistance and extend service life.
- Steel componentry is plated using ROHS Compliant Trivalent Chrome.
- Automatic couplers constructed of brass with steel tubular valve as standard (3/8" to 3/4" couplers have steel prong valves).
- 1/4" manual couplers constructed of brass with steel sleeve and steel tubular valve as standard.
- 3/8" and 1/2" manual couplers constructed of steel as standard with steel tubular valve.

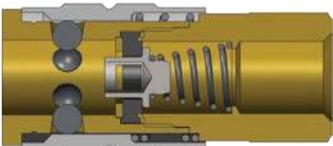

## Seal Components:

- Nitrile (Buna-N) seals are standard, providing a temperature range of -40°F to +250°F (-40°C to +121°C).

It is important to be safe when installing quick disconnect couplings into a pneumatic circuit. Never install a pneumatic coupling directly into an air tool, use a piece of hose that is at least 18" long, between the tool and the coupling, to prevent damage to the coupling. To protect the operator, safety devices, such as a safety check valve and safety cable should be installed in case there is a hose or coupling failure.

# DF-Series Pneumatic Couplings

## Automatic Safety Exhausting Coupler Operation

The D-Series Automatic coupling has been performing reliably and safely for over 50-years. This amazing coupler is an inexpensive solution for automatically connecting pressurized air lines and is the only one-handed single-stage exhausting safety coupler available in the market today!

Most exhausting safety couplers are a two stage system that are expensive and difficult to operate. Why pay extra for safety? Use the D-Series Automatic Safety Exhausting Couplers, available in sizes  $\frac{1}{4}$ " to  $\frac{3}{4}$ ".

1

To disconnect, begin by holding the hose on the nipple side with three of your fingers, leaving your thumb and index finger free.

2

Grab the sleeve with your thumb and index finger and begin to pull the sleeve towards the palm of your hand.

3

After pulling the sleeve, the nipple will move out of the coupler slightly. Continue to hold the hose and coupler sleeve until all air is fully exhausted.

4

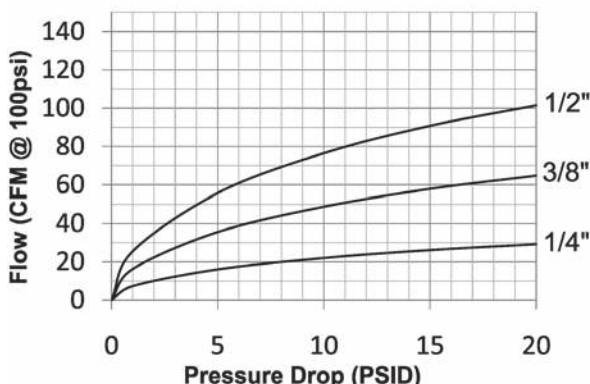

After the line is fully exhausted, you are able to safely separate the nipple from the coupler.

Operating pressure for couplings utilizing hose barb end connections may be dramatically reduced to that of the hose rating and/or hose end connection combination. Consult hose manufacturer's catalog for hose end connection ratings. If in doubt, test under controlled conditions for suitability to application. Dixon Quick Coupling cannot assume liability for misapplication of production resulting in equipment down-time, lost production, and/or personal injury including death.

### J Series Profile

# M-Series Pneumatic Couplings

## Interchange Data:

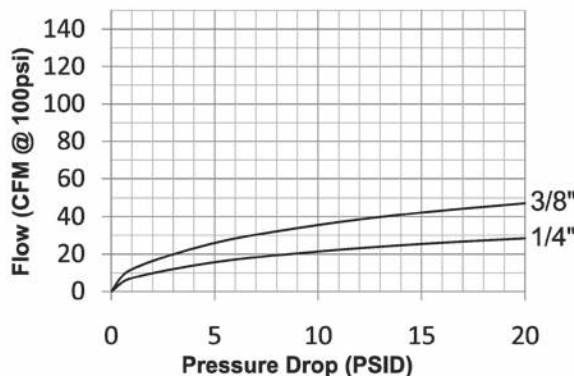

- ARO 210 (1/4") and ARO 310 (3/8") Interchange
- Automatic Couplings Interchange with ARO 210/310 and Hansen Series 210/310
- Manual Couplings Interchange with Parker 50-Series and Amflow Type 'B'

## Materials:

- Machined components are manufactured using solid steel or brass bar stock.
- Stainless steel springs. Carbon steel balls, retaining rings and pins.
- Steel componentry is plated using ROHS Compliant Trivalent Chrome.
- Automatic couplers constructed of steel.
- Manual couplers constructed of brass.

## Seal Components:

- Nitrile (Buna-N) seals are standard providing a temperature range of -40°F to +250°F (-40°C to +121°C).

It is important to be safe when installing quick disconnect couplings into a pneumatic circuit. Never install a pneumatic coupling directly into an air tool, use a piece of hose that is at least 18" long, between the tool and the coupling, to prevent damage to the coupling. To protect the operator, safety devices, such as a safety check valve and safety cable should be installed in case there is a hose or coupling failure.

# CJ-Series Pneumatic Couplings

## Interchange Data:

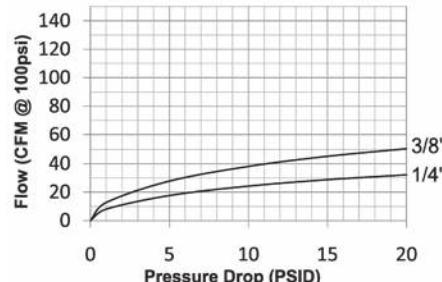

- European High-Flow Interchange
- 1/4" interchanges with Coilhose Megaflow, CEJN 320, and Rectus 25KA/26KA
- 3/8" interchanges with Rectus 27KA and Series 410

## Materials:

- Machined components are manufactured using solid steel or brass bar stock.
- Stainless steel springs. Carbon steel balls and retaining rings.
- Steel componentry is plated using ROHS Compliant Trivalent Chrome.

## Seal Components:

- Nitrile (Buna-N) pneumatically energized seals are standard, providing a temperature range of -40°F to +250°F (-40°C to +121°C).

### SHD Series Profile

**!** Operating pressure for couplings utilizing hose barb end connections may be dramatically reduced to that of the hose rating and/or hose end connection combination. Consult hose manufacturer's catalog for hose end connection ratings. If in doubt, test under controlled conditions for suitability to application. Dixon Quick Coupling cannot assume liability for misapplication of production resulting in equipment down-time, lost production, and/or personal injury including death.

# L-Series Pneumatic Couplings

## Interchange Data:

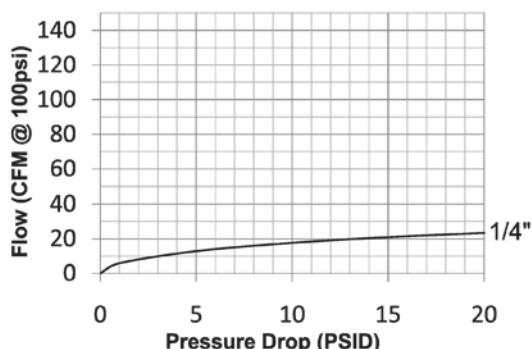

- Lincoln Long-Nose Automotive Interchange
- Parker 70-Series, Tomco Series-1110, Coilhose Type-17

## Materials:

- Machined components are manufactured using solid brass or steel bar stock.
- Stainless steel springs. Carbon steel balls and retaining rings.
- Steel componentry is plated using ROHS Compliant Trivalent Chrome.

## Seal Components:

- Nitrile (Buna-N) seals are standard, providing a temperature range of -40°F to +250°F (-40°C to +121°C).

### L Series Profile

It is important to be safe when installing quick disconnect couplings into a pneumatic circuit. Never install a pneumatic coupling directly into an air tool, use a piece of hose that is at least 18" long, between the tool and the coupling, to prevent damage to the coupling. To protect the operator, safety devices, such as a safety check valve and safety cable should be installed in case there is a hose or coupling failure.

# U-Series Pneumatic Couplings

## Interchange Data:

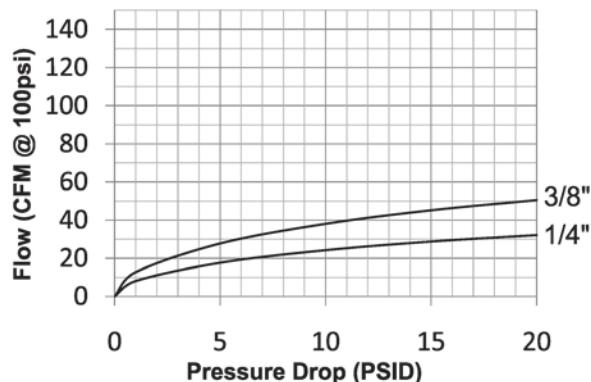

- 2U-Series 6-in-1 (Aro 210, Industrial, Truflate, Lincoln, Italian, and CEJN 320)
- 3U-Series 4-in-1 (ARO 310, Industrial, Truflate, and CEJN 410)
- Parker UC-Series, Hansen Auto-Flo 23, and Tomco Series UC

## Materials:

- Machined components are manufactured using solid brass bar stock.
- Stainless steel springs. Carbon steel balls and retaining rings.
- Valve components are machined from solid brass bar stock.

## Seal Components:

- Nitrile (Buna-N) pneumatically energized seals are standard, temperature range of -40°F to +250°F (-40°C to +121°C).

- Note: Many competitive Universal couplings are unable to match the performance capabilities of the Dixon™ U-Series. Each of the competitive Universal couplers only accept three pneumatic nipple styles. Although the universal coupler permits multiple series nipples to mate with one coupler, it is recommended to match like series couplers and nipples. When using a Universal coupler, the lower performance rating between the coupler and nipple must take precedence.
- Dry air: Some pneumatic applications require the pressurized air to be 'dried' to ensure proper operation of equipment and/or application of product (ie. auto body shops). It is best to match like series couplers and nipples in these applications. If it is necessary to use a Universal coupler, lube the seal and valve area regularly to ensure reliable service.

# NK-Series Pneumatic Couplings

## Interchange Data:

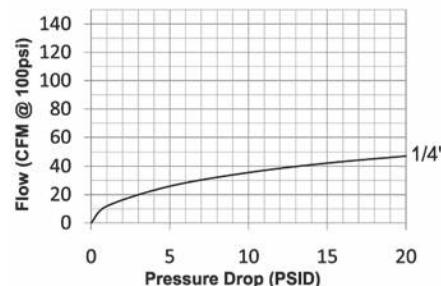

- Japanese Industrial Interchange Pneumatic Coupling
- Nitto Kohki Hi-Cupla 200, Rectus Series 13, and CEJN Series 315

## Materials:

- Machined components are manufactured using solid steel bar stock.
- Stainless steel springs. Carbon steel balls and retaining rings.
- Steel componentry is plated using chrome-over-nickel plating.

## Seal Components:

- Nitrile (Buna-N) seals are standard, providing a temperature range of -40°F to +250°F (-40°C to +121°C).

# A-Series Pneumatic Couplings

## Interchange Data:

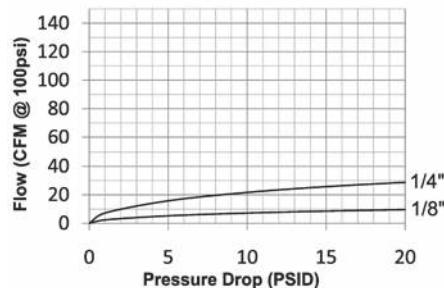

- Dixon Quick Coupling Proprietary Astronautics

## Materials:

- Machined components are manufactured using solid steel or brass bar stock.
- Stainless steel balls, retaining rings, and springs maximize corrosion resistance and extend service life.
- Steel componentry is plated using ROHS Compliant Trivalent Chrome.
- Couplers are constructed of brass with steel valve as standard.

## Seal Components:

- Nitrile (Buna-N) seals are standard, providing a temperature range of -40°F to +250°F (-40°C to +121°C).

### A Series Profile

Operating pressure for couplings utilizing hose barb end connections may be dramatically reduced to that of the hose rating and/or hose end connection combination. Consult hose manufacturer's catalog for hose end connection ratings. If in doubt, test under controlled conditions for suitability to application. Dixon Quick Coupling cannot assume liability for misapplication of production resulting in equipment down-time, lost production, and/or personal injury including death.

# SCV-Series Pneumatic Couplings

## Interchange Data:

- Hansen FS-Series

## Materials:

- Machined components are manufactured using solid brass bar stock.
- Stainless steel springs and roll-pins maximize corrosion resistance and extend service life.

## Seal Components:

- Nitrile (Buna-N) seals are standard, providing a temperature range of **-40°F to +250°F (-40°C to +121°C)**.

## Features:

- Does not prevent backflow
- High flow design results in maximum flow with minimal pressure drop.
- Automatically and instantly protects the operator against hose whip in the event of a damaged hose or coupling.
- In the event of a hose rupture or coupling failure, the valve will automatically reset after the problem is fixed.
- SCV-Series is available in a large selection of sizes ranging from **1/4" to 3", NPTF (BSPP/BSPT threads on request)**.
- Valve operation is fully compliant with OSHA Safety Regulation 1926.302(b)(7), as shown on page 3.

Not recommended for applications requiring 100% of the available air supply. These applications include, but are not limited to, sand blast equipment, pile driving rigs, and expansion joint blow down pipes. It is recommended to install auxiliary safety devices, including Safety Cables, to ensure optimum safety for the operator in the event of a coupling failure or hose rupture.

## Use:

- Safety check valves operate by using the pressure differential across the valve to operate the valve and spring assembly. The pressure differential is directly related to the flow of air (SCFM) through the valve.
- When the pressure differential is within the operating limits - below the cutoff flow - of the unit, the force on the valve exerted by the spring is greater than that caused by the pressure differential (see "Open Position" graphic on next page). The valve remains open and normal operation continues.
- When the pressure differential is above the cutoff limit, the force on the valve exerted by the pressure differential is greater than the force exerted by the spring, and the valve closes (see the "Closed Position" graphic on next page).
- After the repair is made, normal operation is automatically enabled when pressure across the valve equalizes through the bleeder hole.
- The valve spring size can be specified by determining the air flow during normal operation and by estimating the air flow if a failure or rupture occurs.

## Technical Specifications:

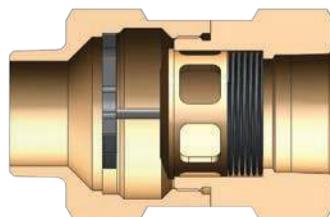

Performance Specifications	Maximum Operating Pressure - Bar (PSI)	Minimum Burst Pressure - Bar (PSI)	Air Flow <sup>1</sup> 30.5m (100')

## Materials:

- Machined components are manufactured using solid steel, brass, 303 stainless steel or 316 stainless steel bar stock.
- Stainless steel balls, retaining rings, and springs maximize corrosion resistance and extend service life.
- Steel componentry is plated using ROHS Compliant Trivalent Chrome.
- Steel coupler sleeves are hardened to resist deformation and maximize service life.
- Steel nipples are hardened to provide heavy duty performance and resist brinneling.

## Seal Components:

- Nitrile (Buna-N) seals are standard providing a temperature range of **-40°F to +250°F (-40°C to +121°C)**.
- 1/8" to 1" steel and stainless couplers have a PTFE anti-extrusion ring.
- 1/8" to 2½" brass couplers have a redundant O-Ring sealing system (dual O-rings/no PTFE back-up ring)
- 1¼" to 2½" steel and stainless couplers have a redundant o-ring sealing system (dual O-rings/no PTFE back-up ring)
- Valve seals are crimped in place to maintain integrity during excessive flow conditions and pressurized connection.

# HS-Series Hydraulic Couplings

## Interchange Data:

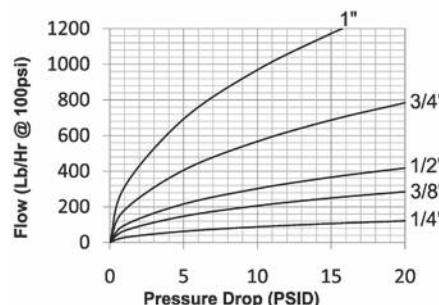

- Interchangeable to ISO7241 Series 'B'
- Parker 60-Series Steam Couplings

## Materials:

- Machined components are manufactured using solid steel, brass, or 303 stainless steel bar stock.
- Stainless steel balls, retaining rings, and springs maximize corrosion resistance and extend service life.
- Steel componentry is plated using ROHS Compliant Trivalent Chrome.
- Large diameter steel steam-sleeves are hardened to resist deformation and maximize coupler service life.
- Steel nipples are hardened to provide heavy duty performance and resist brinelling.
- All couplers have a steel steam-sleeve as standard.

## Seal Components:

- EPDM steam-grade seals are standard, providing a temperature range of **-70°F to +400°F (-57°C to +204°C)**.
- Brass couplers have a redundant O-ring sealing system (Dual O-rings/no PTFE back-up ring)
- Stainless couplers have an O-ring/PTFE anti-extrusion ring sealing system.
- Valve seals are crimped in place to maintain integrity during excessive flow conditions.

Do not disconnect steam couplings while under pressure! Maximum operating temperature for steam service couplings is 194°C (382°F), with an intermittent maximum temperature of 204°C (400°F). Be sure to use safety chains, or equivalent means, to prevent the line from thrashing around in a case where the coupling becomes disconnected.

## AG-Series Hydraulic Couplings

### Interchange Data:

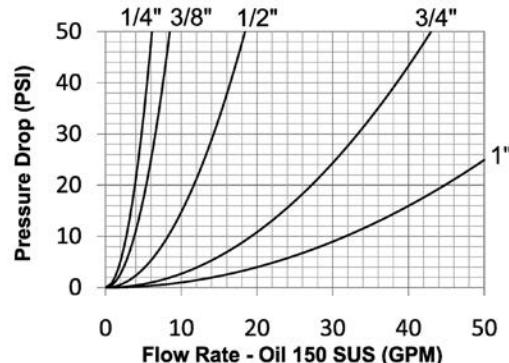

- Pioneer Agricultural Interchange
- Parker/Pioneer 4000 Series, Faster NS/NV-Series
- Safeway Series-S20, Stucchi IR-Series, Snap-Tite 60-Series

### Materials:

- Machined components are manufactured using solid steel bar stock.
- Stainless steel balls, retaining rings, and springs maximize corrosion resistance and extend service life.
- Steel componentry is plated using ROHS Compliant Trivalent Chrome.
- Steel coupler sleeves are hardened to resist deformation and maximize service life.
- Steel nipples are hardened to provide heavy duty performance and resist brinneling.

### Seal Components:

- Nitrile (Buna-N) seals are standard, providing a temperature range of -40°F to +250°F (-40°C to +121°C).
- Couplers have a PTFE Anti-Extrusion ring.
- Poppet valve seals are crimped in place to maintain integrity during excessive flow conditions and pressurized connection.
- Piloted ball valve has a seal that is crimped to prevent low-pressure leakage.

## V-Series Hydraulic Couplings

### Interchange Data:

- Interchangeable to MIL-C-51234
- Snap-Tite H/IH and Faster TNV/TNL

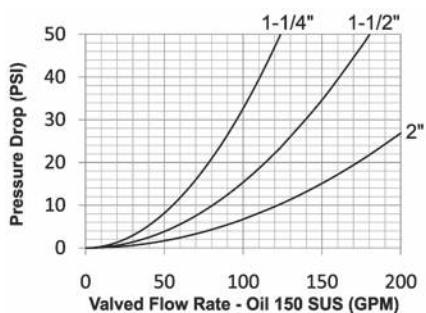

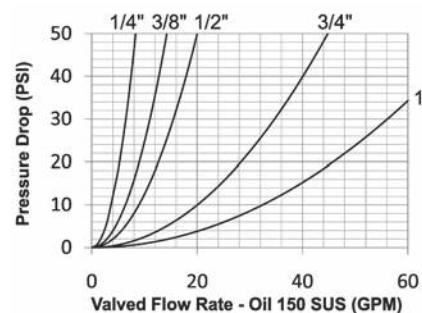

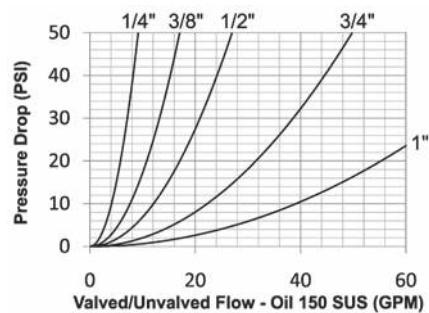

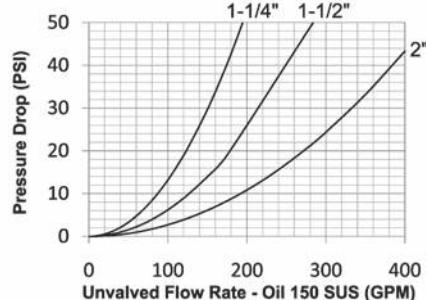

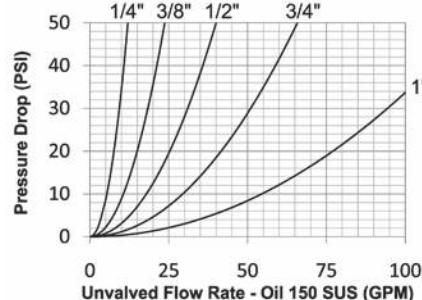

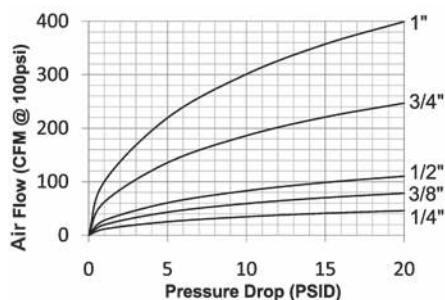

### Materials:

- Machined components are manufactured using solid steel, brass, or 316 stainless steel bar stock.
- Stainless steel balls, retaining rings, and springs maximize corrosion resistance and extend service life.
- Steel componentry is plated using ROHS Compliant Trivalent Chrome.
- Steel coupler sleeves are hardened to resist deformation and maximize service life.
- Steel nipples are machined from high-strength steel and induction hardened.
- Tubular 'TV' valves are constructed from steel bar stock and are designed for optimum performance in pneumatic applications.

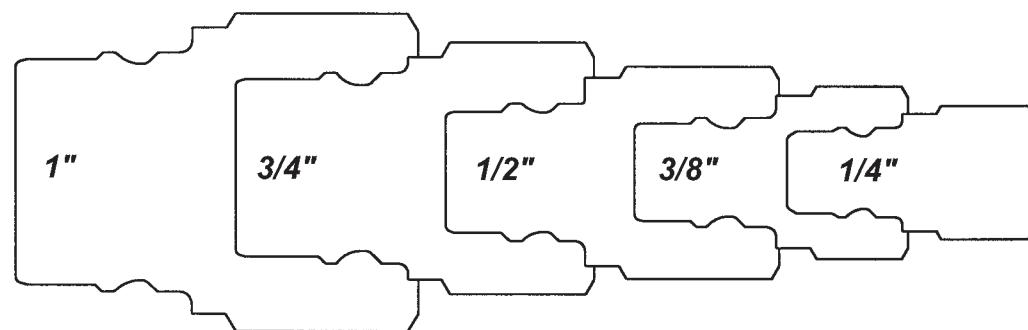

### Seal Components:

- Nitrile (Buna-N) seals are standard, providing a temperature range of -40°F to +250°F (-40°C to +121°C).
- All couplers incorporate a PTFE anti-extrusion ring to protect the seal components from dynamic impulse damage.
- 1/4" to 1" valve seals are crimped in place to maintain integrity during excessive flow conditions and pressurized connection.
- 1 1/4" to 2" valve O-rings are retained by a unique seal-groove profile and are field replaceable.

Note: Air flow data is presented using a coupler with a 'TV' valve and unvalved nipple. This configuration provides the optimal performance for pneumatic applications.

1-1/2"	MIL-C-51234	-	-	12	80.0cc	80.0cc	N/R	120 GPM		
2"	MIL-C-51234	-	-	12	150.0cc	150.0cc	N/R	185 GPM		

Note: Minimum burst pressure ratings were established under laboratory conditions using a Static Burst Unit (SBU). For high impulse applications and to meet Det Norske Veritas (DNV) compliance, the operating pressure must be divided by two (2) to ensure a 4:1 safety factor during system operation.

## TR Interchange Profiles

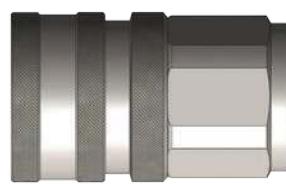

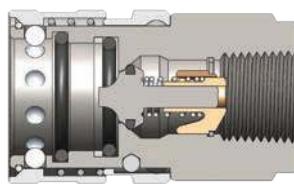

## Materials:

- Machined components are manufactured using solid steel bar stock.
- Stainless steel balls, retaining rings, and springs maximize corrosion resistance and extend service life.
- Steel componentry is plated using ROHS Compliant Trivalent Chrome.
- Steel coupler sleeves are hardened to resist deformation and maximize service life.
- Steel nipples are hardened to provide heavy duty performance.

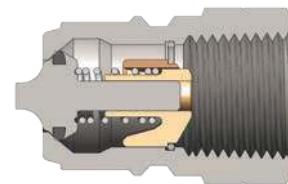

## Seal Components:

- Nitrile (Buna-N) seals are standard, providing a temperature range of -40°F to +250°F (-40°C to +121°C).
- Couplers have a redundant O-ring sealing system (dual O-rings with inner PTFE back-up ring).
- Valve seals are crimped in place to maintain integrity during excessive flow conditions and pressurized connection.

## Materials:

- Machined components are manufactured using solid steel or 316 stainless steel bar stock.
- Stainless steel balls, retaining rings, and springs maximize corrosion resistance and extend service life.
- Steel componentry is plated using ROHS Compliant Zinc Nickel for superior corrosion resistance.
- Steel coupler sleeves are hardened to resist deformation and maximize service life.
- Steel nipples are hardened to provide resistance to brinelling during impulse service.

## Seal Components:

- $\frac{3}{8}$ ",  $\frac{1}{2}$ ", and  $\frac{3}{4}$ " nipples have molded Polyurethane valve seals, with a temperature range of -65°F to +212°F (-54°C to +100°C).
- $\frac{1}{4}$ ",  $\frac{5}{8}$ " and 1" to 2" nipples have Nitrile-energized PTFE valve seals, with a temperature range of -40°F to +250°F (-40°C to +121°C).
- Couplers have a polyurethane valve stem O-ring, with a temperature range of -65°F to +212°F (-54°C to +100°C).
- Ancillary coupler and nipple seals are Nitrile (Buna-N), temperature range of -40°F to +250°F (-40°C to +121°C).
- PTFE or TPC-ET Anti-Extrusion ring protects main coupling valve seal from dynamic impulse pressure damage.

## Materials:

- Machined components are manufactured using solid steel bar stock.
- Steel componentry is plated using a ROHS Compliant Zinc Nickel process providing superior corrosion resistance.
- Stainless steel retaining rings and springs maximize corrosion resistance and extend service life.
- Nipples are hardened to provide resistance to brinelling during impulse service.

## Seal Components:

- 3/8", 1/2", and 3/4" nipples have molded Polyurethane valve seals, with a temperature range of -65°F to +212°F (-54°C to +100°C).
- 5/8" and 1" nipples have Nitrile-Energized PTFE valve seals, with a temperature range of -40°F to +250°F (-40°C to +121°C).
- Ancillary nipple seals are Nitrile (Buna-N), temperature range of -40°F to +250°F (-40°C to +121°C).

## Benefits of the new Equalizer valve system!

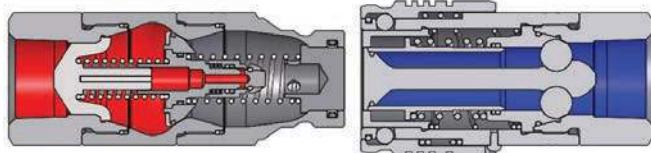

- Non-linear connection force at all pressures
- No maximum connection-pressure restrictions
- Head pressure or valve bleed-by has minimal effect on connection force
- Less susceptible to system contamination
- Design is scalable performing similarly in all sizes
- Smooth connection action

## HTE-Series Hydraulic Couplings

### The Equalizer Connection Process

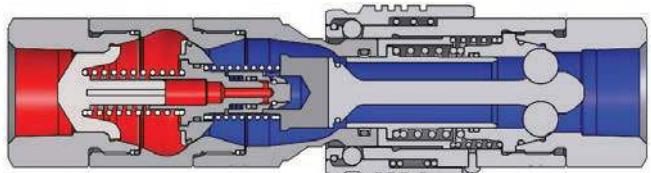

#### Stage 1: The Disconnected State

The plug has residual pressure trapped behind the primary valve, while the coupler has no trapped pressure.

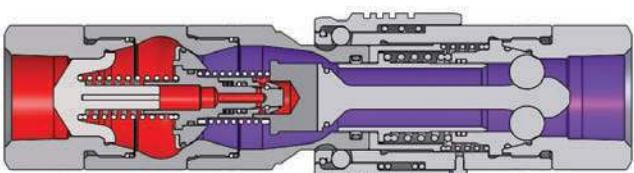

#### Stage 2: Plug Chamber Evacuated

The plug valve is opened, then the socket valve opens, evacuating the plug chamber to the unpressurized socket.

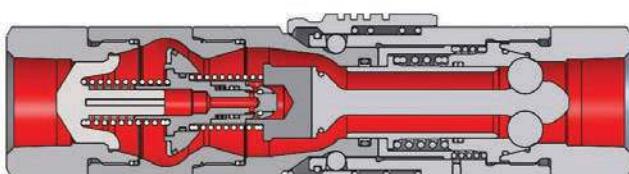

#### Stage 3: Release Pressure

The connection continues, with the Equalizer valve being activated, releasing the trapped pressure into the plug chamber, then to the unpressurized socket.

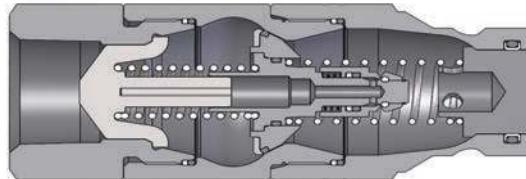

#### Stage 4: Complete the connection

The primary valve can now open easily, since there is no longer any pressure trapped behind it, allowing the socket to fully engage the plug.

## HTE-Series Hydraulic Couplings

# ST-Series Hydraulic Couplings

## Interchange Data:

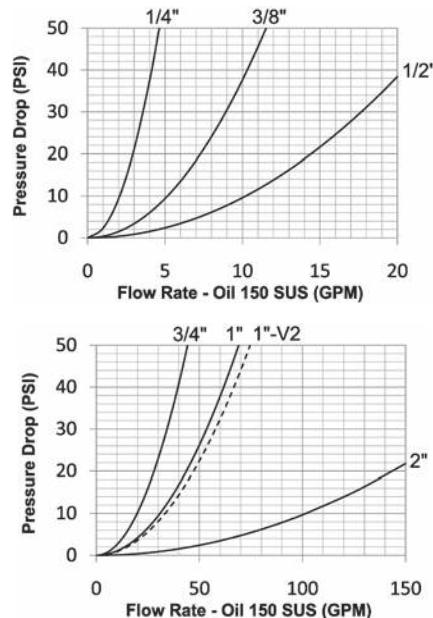

- Interchangeable with Snap-Tite 71-Series

## Materials:

- Machined components are manufactured using solid steel or 316 stainless bar stock.
- Stainless steel balls, retaining rings, and springs maximize corrosion resistance and extend service life.
- Steel componentry is plated using ROHS Compliant Trivalent Chrome.
- Steel coupler sleeves are hardened to resist deformation and maximize service life.
- Steel nipples are hardened to provide heavy duty performance.

## Seal Components:

- Nitrile (Buna-N) seals are standard, providing a temperature range of **-40°F to +250°F (-40°C to +121°C)**.
- All couplers and nipples incorporate PTFE or TPC-ET anti-extrusion rings to protect the seal components from dynamic impulse damage.

Note: Minimum burst pressure ratings were established under laboratory conditions using a Static Burst Unit (SBU). For high impulse applications and to meet Det Norske Veritas (DNV) compliance, the burst pressure must be divided by four (4) to ensure a 4:1 safety factor during system operation.

### ST Series Profiles

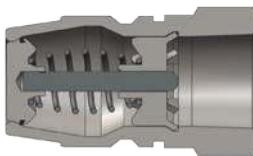

Note: Minimum burst pressure ratings were established under laboratory conditions using a Static Burst Unit (SBU). For high impulse applications and to meet Det Norske Veritas (DNV) compliance, the burst pressure must be divided by four (4) to ensure a 4:1 safety factor during system operation.

## PD-Series Hydraulic Couplings

### Interchange Data:

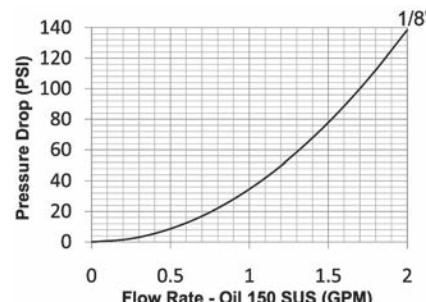

- Interchangeable to ISO15171-1
- Parker PD-Series, Aeroquip FD90, Tomco Series DK

### Materials:

- Machined components are manufactured using solid steel bar stock.
- Stainless steel springs. Carbon steel balls and retaining rings.
- Steel nipples are machined from solid steel bar stock and hardened.
- Steel componentry is plated using ROHS Compliant Trivalent Chrome.

### Seal Components:

- Nitrile (Buna-N) seals are standard, providing a temperature range of -40°F to +250°F (-40°C to +121°C).
- PTFE anti-extrusion ring protects main coupler O-ring from dynamic impulse pressure damage.

# VEP-Series Hydraulic Couplings

## Interchange Data:

- Interchangeable with Stucchi VEP-P/VEP-HD Series, DNP PST4/FSI Series, Voswinkel FT Series, Parker FET-Series, and Holmbury HFT Series.

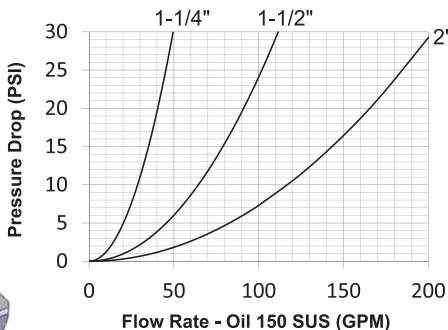

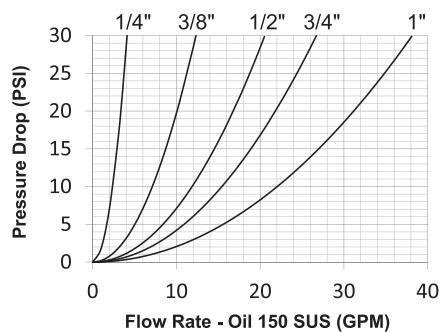

## Seal Components:

- Nipples have Nitrile-Energized PTFE valve seals, with a temperature range of **-40°F to +250°F (-40°C to +121°C)**
- **3/8"** nipples have molded Polyurethane valve seals, with a temperature range of **-65°F to +212°F (-54°C to +100°C)**
- **1/4" to 3/4"** valve stems have molded Acetal seals, with a temperature range of **-65°F to +212°F (-54°C to +100°C)**
- **1" to 2"** valve stems have molded Polyurethane seals, with a temperature range of **-65°F to +212°F (-54°C to +100°C)**
- Ancillary coupler and nipple seals are Nitrile (Buna-N), with a temperature range of **-40°F to +250°F (-40°C to +121°C)**
- TPC-ET Anti-Extrusion ring protects main coupling valve seal from dynamic impulse pressure damage

## Materials:

- Machined components are manufactured using solid steel bar stock
- Stainless steel retaining rings and springs maximize corrosion resistance and extend service life
- Steel componentry is plated using ROHS Compliant Zinc Nickel for superior corrosion resistance.

<sup>1</sup> Couplings Impulse tested in accordance with ISO7241-2 for 1,000,000 cycles connected and 100,000 cycles disconnected at 133% of ISO Working Pressure.

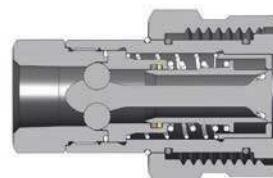

<sup>2</sup> Couplings Impulse tested in accordance with ISO7241-2 for 100,000 cycles connected and disconnected at Maximum Impulse pressure listed

<sup>3</sup> System temperature for Maximum Connect/Disconnect Pressure must not exceed 150°F (65°C)

# VEP-Series Hydraulic Couplings

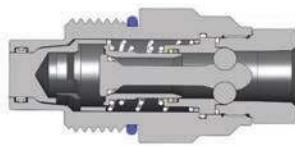

## How to Connect & Disconnect the VEP-Series Coupling

1. Prior to connecting, thoroughly clean all mating surfaces and threads on both halves, then pull the coupler sleeve forward.
2. To initiate the connection, align the coupler and plug, pushing/turning the coupler sleeve towards the plug while engaging the threads. Keep the mating halves aligned during the connection process.
3. Allow the threads to pull the coupler onto the plug, do not push the coupler onto the plug.
4. The first phase of the connection should be threaded by hand, without the use of tools. Please note the connection sleeve may seize when dirt and debris accumulate in the threads - wipe away debris with a cloth, compressed air, or a brush.
5. The second phase of the connection may require a wrench if the pressure is higher than anticipated.
6. Continue to thread the coupler sleeve onto the plug until the end of the sleeve meets the plug body
7. To disconnect, use a wrench to break the coupler sleeve free and keep the mating halves aligned during the disconnection process.

VEP Series dust caps and plus are aluminum with a steel cable

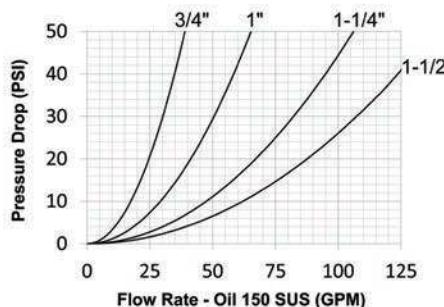

# W-Series Hydraulic Couplings

## Interchange Data:

- Aeroquip 5100-Series, Parker 6100-Series
- Snap-Tite 78-Series, Faster Series-FB, Safeway S51-Series

## Materials:

- Machined components are manufactured using solid steel and brass bar stock.
- Stainless steel retaining rings, and springs maximize corrosion resistance and extend service life.
- Steel componentry is plated using ROHS Compliant Trivalent Chrome.
- Rugged steel wing nut for threaded connect and disconnect operation.
- For steel models, coupler valve sleeve and nipple valve are constructed of brass.

\*\*Impulse Testing conducted in accordance with ISO7241-2 at 133% of Working Pressure for 1,000,000 cycles both connected and disconnected.

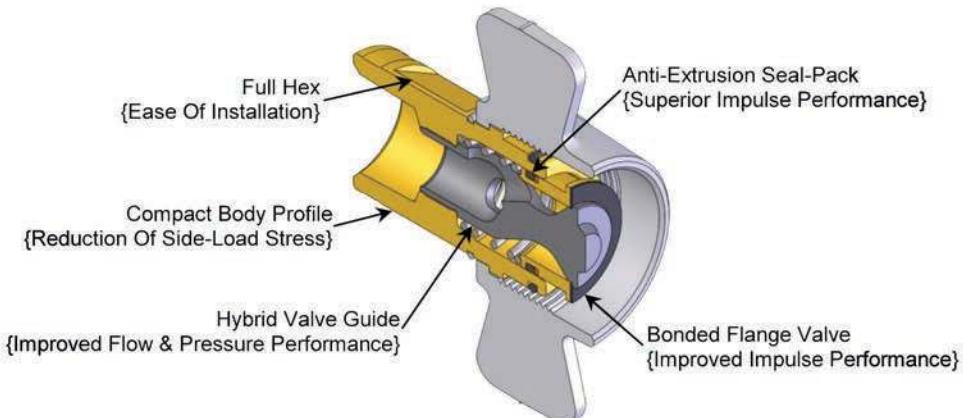

Although the wingstyle couplings are able to connect and disconnect while under pressure, it is recommended that hydraulic power supply be de-energized during connection to ensure operator safety. If it is not possible to de-energize the circuit, operators must be aware of their surroundings to ensure that an attachment or tool does not put them at risk, once hydraulic power is applied during the connection process.

W-Series couplings are not recommended for continuous hydraulic impulse applications at rated pressures.

# WS-Series Hydraulic Couplings

## Interchange Data:

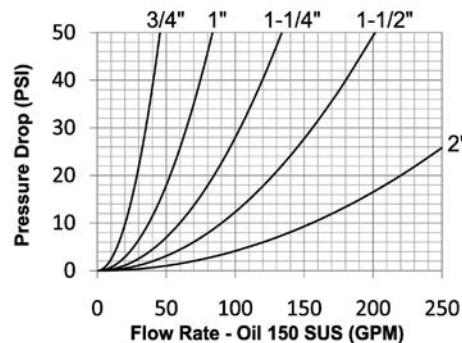

- Snap-Tite 75-Series, Hydraulics Inc. Series-5TV, DNP VFF-HD, Stucchi VOF, Faster OGV, Eaton FD85, Holmbury LC

## Materials:

- Machined components are manufactured using solid steel or 316 stainless steel bar stock.
- Stainless steel retaining rings, and springs maximize corrosion resistance and extend service life.
- Steel componentry is plated using ROHS Compliant Zinc Nickel for superior corrosion resistance.
- Rugged high-strength steel sand-cast wing nut for threaded connect and disconnect operation.
- 316 stainless steel nipple connection-threads are coated to prevent galling during connection/disconnection.

## Seal Components:

- Nitrile (Buna-N) seals are standard, providing a temperature range of -40°F to +250°F (-40°C to +121°C).
- PTFE anti-extrusion ring protects main coupling O-ring from dynamic impulse pressure damage.
- Main valve seal is 'housed' to improve seal integrity during pressurized connection/disconnection.

## T-Series Hydraulic Couplings

### Interchange Data:

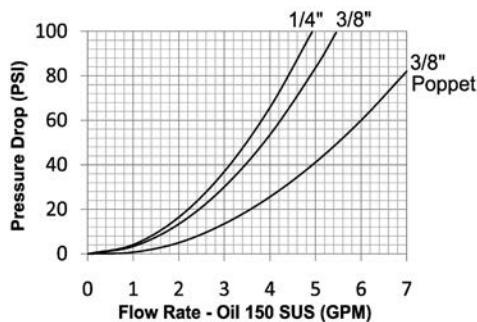

- High Pressure Screw-Together Interchange
- Parker/Pioneer 3000-Series, Enerpac C604, Stucchi IVHP
- Hansen WS56000, Snap-Tite 76-Series, DNP PVM

### Seal Components:

- Urethane seal is standard in ball valve couplers and provides resistance to extrusion when subjected to high pressure - temperature range **-40°F to +180°F (-40°C to +82°C)**.
- Nitrile seals are standard in poppet valve couplings, providing a temperature range of **-40°F to +250°F (-40°C to +121°C)**.

### Materials:

- Machined components are manufactured using solid steel or 316 stainless steel bar stock.
- Chrome steel ball valve is mechanically seated to improve low pressure sealing performance.
- Steel nipples are machined from solid high strength steel bar stock.
- Steel componentry is plated using ROHS Compliant Trivalent Chrome.

# CVV-Series Hydraulic Couplings

## Interchange Data:

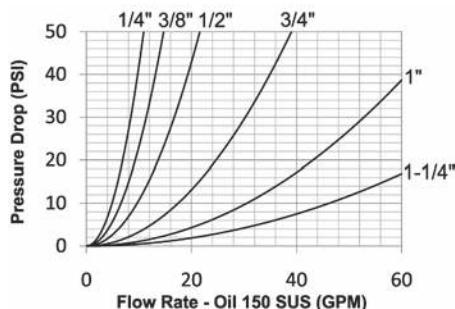

- European Screw-Together Interchange
- Inteva STG-Series, Faster CVV-Series, DNP PVV3, Voswinkel Type-HS

## Materials:

- Machined components are manufactured using solid steel bar stock.
- Steel retaining rings, and springs maximize service life in rugged environments.
- Steel componentry is plated using ROHS Compliant Trivalent Chrome.

## Seal Components:

- Nitrile (Buna-N) seals are standard, providing a temperature range of -13°F to +257°F (-25°C to +125°C).
- Nipples have a PTFE Anti-Extrusion ring to prevent O-ring damage during dynamic impulse service.

## Dixon™ Blowout Prevention Couplings

### Application:

- designed specifically for blow-out prevention systems on drilling rigs

### Product Offering:

- VEP-BOP Series:
  - thread to connect flush face interchange
  - $\frac{5}{8}$ " to 1 $\frac{1}{2}$ " in steel
- H-BOP Series:
  - ISO-B interchange
  - $\frac{5}{8}$ " to 1" in steel and 316 stainless
- WS-BOP Series:
  - same reliable Wing coupling you know, new red components
  - $\frac{3}{4}$ " to 2" in steel and 316 stainless

### Features:

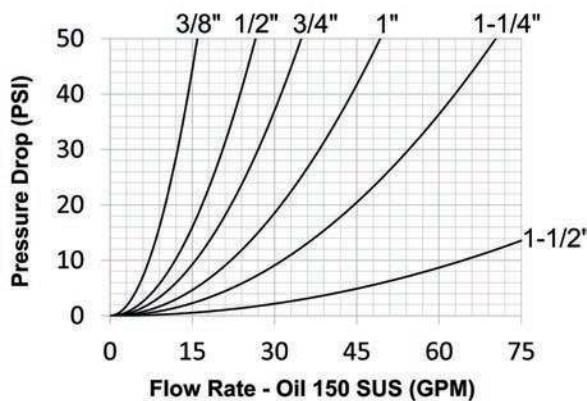

- fire tested and Lloyd's certified to 700°C (1300°F) in accordance with API 16D, certificate available upon request
- certified at a test pressure of 5,000 PSI
- red powder coated components and external seals provide easy BOP approved identification
- critical seals are FKM

# VEP-BOP Series Hydraulic Couplings

## Interchange Data:

- Stucchi VEP/VEP-HD Series, DNP FSI-BOP Series

## Seal Components:

- Blow-out Prevention (BOP) coupling critical seals are severe service FKM
- PTFE Anti-Extrusion ring protects main coupling valve seal from dynamic impulse pressure damage

## Materials:

- Machined components are manufactured using solid steel bar stock
- Stainless steel retaining rings and springs maximize corrosion resistance and extend service life
- Steel components are plated using ROHS Compliant Zinc Nickel
- Red powder coated components and external O-rings for easy BOP service identification

- BOP couplings have been fire tested and Lloyd's certified to 700°C (1300°F) in accordance with API 16D. Certificate available upon request.
- Use VEP dust caps and dust plugs found on page 123.

## WS-BOP Series Hydraulic Couplings

### Interchange Data:

- Snap-Tite 75-Series, DNP VFF-HD BOP Series

### Seal Components:

- Blow-out Prevention (BOP) couplings contain severe service FKM seals
- PTFE Anti-Extrusion ring protects main coupling valve seal from dynamic impulse pressure damage
- Main valve seal is "housed" to improve seal integrity during pressurized connection/disconnection

### Materials:

- Machined components are manufactured using solid steel or 316 stainless steel bar stock.
- Stainless steel retaining rings, and springs maximize corrosion resistance and extend service life.
- Steel componentry is plated using ROHS Compliant Zinc Nickel.
- Rugged high-strength steel wing nut for threaded connect and disconnect operation.
- 316 stainless steel nipple connection-threads are coated to prevent galling during connection/disconnection.
- Red powder coated coupler wing-nut and external nipple O-ring for easy BOP service identification.

- BOP couplings have been fire tested and Lloyd's certified to 700°C (1300°F) in accordance with API 16D. Certificate available upon request.
- Use WS dust caps and dust plugs found on page 132.

## H-BOP Series Hydraulic Couplings

### Interchange Data:

- Eaton/Hansen HKFR-Series, DNP HNV-BOP Series
- Interchangeable to ISO7241 Series B

### Seal Components:

- Blow-out Prevention (BOP) couplings contain severe service FKM seals
- PTFE Anti-Extrusion ring protects main coupling body seal from dynamic impulse pressure damage
- Coupler has redundant O-ring sealing system
- Valve seals are crimped in place to maintain integrity during excessive flow conditions and pressurized connection

### Materials:

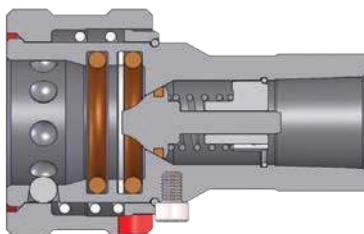

- Machined components are manufactured using solid steel or 316 stainless steel bar stock.
- Stainless steel balls, retaining rings, and springs maximize corrosion resistance and extend service life.
- Steel componentry is plated using ROHS Compliant Trivalent Chrome.
- Steel coupler sleeves are hardened to resist deformation and maximize service life.
- Steel nipples are hardened to provide heavy duty performance and resist brinelling.
- Red powder coated coupler sleeve and nipple hex for easy BOP service identification
- Locking sleeve is standard

- BOP couplings have been fire tested and Lloyd's certified to 700°C (1300°F) in accordance with API 16D. Certificate available upon request.
- Use H-Series dust caps and dust plugs found on pages 67 and 68.

## Seal Components:

- Nitrile (Buna-N) seals are standard, providing a temperature range of **-40°F to +250°F (-40°C to +121°C)**.

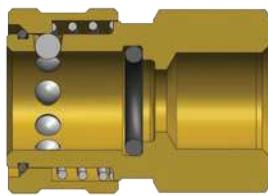

## Materials:

- Machined components are manufactured using solid steel, brass, or 303 stainless steel bar stock.
- Stainless steel balls, retaining rings, and springs maximize corrosion resistance and extend service life.
- Steel componentry is plated using ROHS Compliant Trivalent Chrome.
- 1 1/4" to 2" brass couplers have steel sleeves as standard to maximize service life, hardened to resist deformation.
- Steel nipples are hardened to provide heavy duty performance.

## Seal Components:

- Silicon gaskets and valve O-rings are standard, providing a temperature range of -90°F to +400°F (-68°C to +205°C).

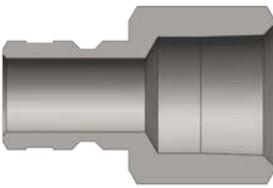

## Materials:

- Machined components are manufactured using solid steel or brass bar stock.
- Stainless steel balls, retaining rings, and springs maximize corrosion resistance and extend service life.
- Steel componentry is plated using ROHS Compliant Trivalent Chrome.

Counterbored mold ports will protect the male threaded nipple, allowing the nipple to be mounted below the surface, simplifying storing and handling of molds. Dixon™ male threaded plugs are constructed of corrosion resistant brass to maximize longevity in moist environments.

## Materials

A	Aluminum
B	Brass
NB	Naval Brass
SB	Stress Relieved Brass
S	303 Stainless Steel
SS	316 Stainless Steel
SN	Nitronic Stainless
P	Plastic

Standard material is steel.  
No designation is necessary for standard steel configurations.

## Valve Options

E	Unvalved (no valve)
V	Valved
BV	Brass Valve
SV	303 SS Valve
SSV	316 SS Valve
PV	Poppet Valve
VA	Valve Actuator
HV	Heavy Duty Valving
TV	Tube Valve
BTV	Brass Tube Valve
RV	Prong Valve

## Seals

F	FKM™
P	EPDM
E	Neoprene
S	Silicone
U	Urethane
H	Aflas™
K4	Kalrez® 4079
K6	Kalrez® 6375
K7	Kalrez® 7075
M	Military Low Temp Nitrile
JF	Hydrocarbon Fuel Nitrile
T	PTFE
TS	PTFE / Silicone
D	FDA FKM™
FS	Fluorosilicone
PS	EPDM (steam)
M1	Nitrile (FDA)
C	Celazole Back-up
CZ	Chemrez

Standard seal is Nitrile. No designation is necessary for standard Nitrile seal configurations.

## Product Series

A	Perfecting Astronautics High Pressure Pneumatic
AG	Agricultural Interchange Hydraulic
BR	Rectus 21 Interchange
CJ	European High Flow Interchange
CM	Mold Coolant Interchange
CVV	European Screw Together

V	Snap-Tite H/IH Hydraulic Interchange
VEP	Stucchi VEP Hydraulic Interchange
W	Wingstyle Interchange
WS	High Pressure Wingstyle

## End Connection

F	Female NPT(F)
M	Male NPT(F)
BF	Female BSPP
BM	Male BSPT
GM	Male BSPP
OF	Female ORB
OM	Male ORB
JF	Female 37° JIC
JM	Male 37° JIC
JB	Male Bulkhead 37° JIC
RM	Male ORFS
RB	Bulkhead ORFS
P	Tube Fitting
S	Hose Barb
4S	45° Hose Barb
9S	90° Hose Barb
CS	Collar Hose Barb
B	Push-Loc Barb
4B	45° Push-Loc Barb
9B	90° Push-Loc Barb
FM	Female Metric
MM	Male Metric
MBM	Metric Bulkhead

## Sleeve Options

LS	Locking Sleeve
BLS	Brass Locking Sleeve
ZLS	Steel Locking Sleeve
XLS	303 SS Locking Sleeve
YLS	316 SS Locking Sleeve
FS	Flanged Sleeve
BFS	Brass Flanged Sleeve
FLS	Flanged Locking Sleeve
ZFS	Steel Flanged Sleeve
FSB	Silicone Fryer Boot
BS	Brass Sleeve
ZS	Steel Sleeve
XS	303 SS Sleeve
YS	316 SS Sleeve
PTC	Push-To-Connect Sleeve
TG	Thermal Guard Sleeve
PL	Automatic Latch Pin
PB	Automatic Ball Latch
TG	Thermal Guard Sleeve
HN	Hex Nut Sleeve
HNS	303 SS Hex Nut Sleeve
TP	Tangle Prevention
FNS	Flanged Nylon Sleeve
NLS	No Locking Sleeve

## To Designate Couplers

Body size numerical designation precedes coupling series alpha designation. Example: 2HF2 (1/4" ISO-B Coupler)

## To Designate Nipples

Coupling series alpha designation precedes body size numerical designation. Example: H2F2 (1/4" ISO-B Nipple)

FKM™

Kalrez® is a trademark of Dupont/Dow Elastomers

PTFE is a trademark of Dupont

Aflas® is a trademark of Asahi Glass Limited

## Other Options

4	Black Oxide Plating
7	Bright Nickel Plating
8	Electroless Nickel Plating
9	PTFE Coating
10	Standard Nickel Plating
11	Chrome over Nickel
BMF	Flange Mount Bracket
C1	Oxygen Clean
HL	Extended Hex
L##	Length
WF	Wrench Flats

Many variations of the part numbers contained within this guide can be ordered utilizing the format shown above. However, some variations may require minimum order quantities, longer lead times, and/or price adjustments based upon the uniqueness of construction. Please contact your Dixon Quick Coupling representative for details regarding your particular coupling configuration

## Limited Warranty

DIXON VALVE AND COUPLING COMPANY (herein called "Dixon") warrants the products described herein, and manufactured by Dixon to be free from defects in material and workmanship for a period of one (1) year from date of shipment by Dixon under normal use and service. It's sole obligation under this warranty being limited to repairing or replacing, as hereinafter provided, at its option any product found to Dixon's satisfaction to be defective upon examination by it, provided that such product shall be returned for inspection to Dixon's factory within three (3) months after discovery of the defect. The repair or replacement of defective products will be made without charge for parts or labor. This warranty shall not apply to: (a) parts or products not manufactured by Dixon, the warranty of such items being limited to the actual warranty extended to Dixon by its supplier; (b) any product that has been subject to abuse, negligence, accident, or misapplication; (c) any product altered or repaired by others than Dixon; and (d) to normal maintenance services and the replacement of service items (such as washers, gaskets and lubricants) made in connection with such services. To the extent permitted by law, this limited warranty shall extend only to the buyer and any other person reasonably expected to use or consume the goods who is injured in person by any breach of the warranty. No action may be brought against Dixon for an alleged breach of warranty unless such action is instituted within one (1) year from the date the cause of action accrues. This limited warranty shall be construed and enforced to the fullest extent allowable by applicable law.

Other than the obligation of Dixon set forth herein, Dixon disclaims all warranties, express or implied, including but not limited to any implied warranties of merchantability or fitness for a particular purpose, and any other obligation or liability. The foregoing constitutes Dixon's sole obligation with respect to damages, whether direct, incidental or consequential, resulting from the use or performance of the product.

Some products and sizes may be discontinued when stock is depleted, or may require a minimum quantity for ordering.

## Limits of Liability

This catalog is intended as a product offering. It is not intended to be a user or technical manual. Information in this catalog is subject to change without notice. All users and distributors of products sold through this catalog should contact Dixon™ with questions of use, compatibilities, coupling procedures and life of product. Our full-time engineering and test staff is always available to recommend uses and to assist distributors and users with any questions.

## Safety

Safety logos, which appear throughout our catalog, are used as a reminder that the user should carefully review for the appropriateness of the product for the media, application and environment in which it will be used.

NOTE: Because of the health hazards associated with contamination and lead content in drinking water systems, Dixon™ couplings, unless otherwise specifically approved, are not recommended for potable water service and should not be used in applications where drinking water will contact the wetted surfaces of the coupling.

Warning: Dixon™ products may contain chemicals known to the State of California to cause cancer, birth defects, or other reproduction harm.

## Copyright

Copyright © 2016 by Dixon Valve and Coupling

All rights reserved. This book is copyrighted material. Use, reproduction or copying of it by anyone other than Dixon™ is strictly forbidden without its express written consent.

**NOTE:** Reasonable care has been taken in preparing this Illustrated Price List. Dixon Quick Coupling reserves the right to make corrections and price changes.

NOTE: Because of the health hazards associated with contamination and lead content in drinking water systems, Dixon couplings, unless otherwise specifically approved, are not recommended for potable water service and should not be used in applications where drinking water will contact the wetted surfaces of the coupling.
