

## Instructions for DrainCovers

Our DrainCovers protect against hazardous materials for drains, grates and manholes.

Follow these 3 EASY STEPS to assure maximum effectiveness:

1. Make sure the DrainCover is the correct size.
  - For best results, use a DrainCover that is 6" larger than the outside of the drain.
2. Deploy the DrainCover
  - Be sure all stones, branches, or other debris are removed from the drain you are covering.
  - Remove the plastic film from the DrainCover and save it to replace after use.
  - Center the DrainCover (either side) over the drain, grate, or manhole you are sealing.
  - For a faster seal, you may lightly step on the DrainCover. Never attempt this if the spill has already reached the drain.
3. Rinse and Repeat
  - It is critical that you wash DrainCovers and allow them to dry before storing them away
  - Wash the DrainCover warm water with a non-abrasive detergent or petroleum solvent cleaner.
  - Dry with a cloth and re-apply the plastic film.\*
  - Using the tube provided, roll the DrainCover and place it back into the box provided for storage.  
**IMPORTANT: Do not store without protective plastic film.**
  - Store the DrainCover out of direct sunlight.

**\*NOTE:** Always follow your state and local regulations regarding proper decontamination and waste handling procedures if the DrainCover comes into contact with hazardous chemicals.
