CHAIN & SPROCKET

To compete in today's global marketplace, you need a supplier who can provide chain and sprockets that meet your quality, cost, and delivery requirements. That is why you rely on IDC Select®.

We carry a wide array of roller chain suitable for nearly every application. IDC Select® roller chain is manufactured to ANSI standards with wide waist link plates while offering a solid bushing/solid roller design for smoother, longer running applications. Our roller chain is available in standard and double pitch roller chain with nickel plated, stainless steel, and attachment chain options.

We also offer a full range of sprockets designed to operate on American Standard Roller Chain. IDC Select® sprockets are supplied with hardened teeth and are black oxide coated. They are available in plain bore, finished bore, taper and QD® bushing designs. All finished bore sprockets are furnished complete with a standard keyway and two setscrews.

Contact IDC Select® at info@IDCselect.com for questions or with special requests.

Taper-Lock® is a registered trademark of Reliance Electric.
QD® is a registered trademark of Emerson Electric.

CHAINS

IDC Select® standard roller chain is broadly used in power transmission applications ranging from general industrial applications to operation in such specialized areas as food processing and heavy construction equipment. Available in single and multiple strand designs, IDC Select® roller chain will meet most drive requirements.

IDC Select® products are available exclusively through a nationwide network of independent industrial distributors with local inventory and industry expertise ready to meet your delivery and service requirements. IDC Select® chains are manufactured under rigid quality control, from raw material to the finished products to provide high accuracy, strength, and durability. Accurate control for the heat treatment of chain components provides uniform and deep hardened surfaces. Inspections are conducted during every stage of manufacturing, including visual, dimensional and physical, as well as chemical analysis. Hardness, tensile strength, and shear strength are tested to ensure uniformity.

section 1:

ANSI STANDARD CHAINS

ANSI standard roller chains represent the most common roller chain sold in the market today. IDC Select® roller chain is manufactured in accordance with American National Standards Institute (ANSI) standard roller chains B29.1 standards.

IDC Select® roller chain is designed and built to provide maximum strength and wear life. Solid bushings, solid rollers, wide waist link plates and appropriate press fits are just a few of the reasons it outperforms the competition.

BRITISH STANDARD

section 3:

CORROSION RESISTANT CHAIN

IDC Select® corrosion resistant chain comes in nickel plated and stainless steel varieties.

IDC Select® stainless steel roller chain is manufactured using 300 series stainless steel with a split bushing/solid roller design. These chains are designed to be used in environments that are highly acidic or alkaline. They can also be used where the chain is exposed to moisture or in extreme temperatures where resistance to corrosion is a requirement of the application.

IDC Select® nickel plated chains are solid bushing/solid roller design. All the individual components are plated prior to assembly to provide uniform coverage. These chains are ideal for outdoor service as well as mildly corrosive applications.

CORROSION RESISTANT

section 4:

SPECIALTY CHAIN

IDC Select® specialty chains include leaf, hollow pin, agricultural, citrus and coupling chains. Each has its own unique features and benefits with the same level of quality you have come to expect of IDC Select® roller chain.

IDC Select® leaf chains generally have greater tensile strength than roller chain and run over a sheave versus a sprocket. The BL series chain was designed for moderate to heavy duty applications. They are most often utilized in counterweight applications for machine tools, elevator and oven doors, fork lift truck masts and similar lifting or balancing applications.

IDC Select® hollow pin chain facilitates fixing attachments to outer links by bolting through the hollow pin and is suitable for use in all normal conditions.

IDC Select® offers citrus processing chains that have been engineered to meet these specialized demands. The conveyor chain, with D-5A & D-5B attachments, is used in washing, sorting, and inspection lines.

section 5:

DOUBLE PITCH CHAIN

Drive series “A”: IDC Select® double pitch drive chain provides an economical solution for drives where speeds are low, center distances are longer, and loads are low to moderate. The component parts of the chain are similar to ANSI standard chain, but the “figure eight” style side plates are twice the pitch of their ANSI counterparts. Double pitch chain is lighter, more economical, and tends to have a shorter wear life than the standard ANSI series. Drive series double pitch chain is designated with the prefix “A”.

Conveyor series “C”: IDC Select® double pitch conveyor chain is ideally suited for light to medium duty material handling applications. This chain is available in standard roller and large roller series. C2000 series chain has standard size rollers that are the same diameter as ANSI standard chain of half the pitch with straight side plates. C2202 series chain is identical to the C2000 series with the exception that it has large, oversized rollers which project beyond the side plates to produce a rolling action.

IDC Select® stainless steel chain is split bushing/solid roller

IDC SELECT® ROLLER CHAIN

DOUBLE PITCH ROLLER CHAINS

Drives series “A”: IDC Select® double pitch drive chain provides an economical solution for drives where speeds are low, center distances are longer, and loads are low to moderate. The component parts of the chain are similar to ANSI standard chain, but the “figure eight” style side plates are twice the pitch of their ANSI counterparts. Double pitch chain is lighter, more economical, and tends to have a shorter wear life than the standard ANSI series. Drive series double pitch chain is designated with the prefix “A”.

Conveyor series “C”: IDC Select® double pitch conveyor chain is ideally suited for light to medium duty material handling applications. This chain is available in standard roller and large roller series. C2000 series chain has standard size rollers that are the same diameter as ANSI standard chain of half the pitch with straight side plates. C2202 series chain is identical to the C2000 series with the exception that it has large, oversized rollers which project beyond the side plates to produce a rolling action.

SPROCKETS

IDC Select® offers a wide range of high quality roller chain sprockets produced in ISO certified facilities to ANSI standards. Plain bore, finished bore, taper and QD® bushing designs are available. All IDC Select® sprockets come with hardened teeth and black oxide finish for long lasting service life. The finished bore design comes complete with a keyway on the centerline of the sprocket tooth and two setscrews, one over the keyway and one at 90°.

STANDARD SPROCKETS

IDC Select® offers a wide range of high quality roller chain sprockets produced in ISO certified facilities to ANSI standards. Plain bore, finished bore, taper and QD® bushing designs are available. All IDC Select® sprockets come with hardened teeth and black oxide finish for long lasting service life. The finished bore design comes complete with a keyway on the centerline of the sprocket tooth and two setscrews, one over the keyway and one at 90°.

STANDARD KEYWAYS AND SETSCREWS

DISCLAIMER

This catalog is provided solely to give you the necessary data for your product selection. Product performance is affected by many factors beyond the control of IDC Select®. Therefore, the suitability and feasibility of all products selected must be validated by you for your applications.

Every reasonable effort has been made to ensure the accuracy of the information in this catalog, but no liability is accepted for errors, omissions, or for any other reason. Specifications within this catalog are subject to change without notice.

WARNING

Failure to observe warnings could create a risk of death or serious injury.

Proper maintenance and handling practices are critical. Always follow installation instructions and maintain proper lubrication.

CAUTION

Failure to follow these cautions may result in property damage.

1. Use only subassemblies for assembling chain strands.
2. Do not use individual chain components and do not mix subassemblies from different chain manufacturers.
3. Do not reuse sections from damaged chain. Damage from overloading or yielding may be present though not apparent.
4. Do not use worn chain or install new chain on worn sprockets.
